## Engineering Manager

An opportunity has arisen due to restructuring and expansion, for this key role as the Engineering Manager for the Malton site. This role will lead the engineering function and provide robust and competent technical support to all design staff (both Mechanical and CE & I).

The successful candidate will be:

- Qualified to a relevant and recognised industry standard.
- Have a demonstrable technical aptitude in the discipline & relevant technical and industrial experience.
- Proven managerial experience in a busy department

The key accountabilities of the Engineering Manager role are:

- Accountable for the engineering process, engineering quality standards and 'designed for manufacture' quality as required.
- Responsible for Technical development to deliver fit for purpose solutions within the client's specification.
- Responsible for regulatory compliance in meeting statutory and company requirements.
- Responsible for ownership of engineering quality.
- Sets approval delegations for all disciplines to allow work to progress within the quality framework.
- Service provider delivering to meet the client's and company's requirements.
- Owner of the technical design resource pool
- Responsible for staff and process development
